

# Social Media Management

## Admin:

First of all check your server is running or not then make sure you are connected to the same network then make sure ip address that you are providing is correct to the server ip.

Enter IP Address  
To Connect To Server

192.168.18.233

Enter correct ip address

Connect

If ip address is correct admin see login page and can login using admin credentials , after login admin see small box with two button like this below;

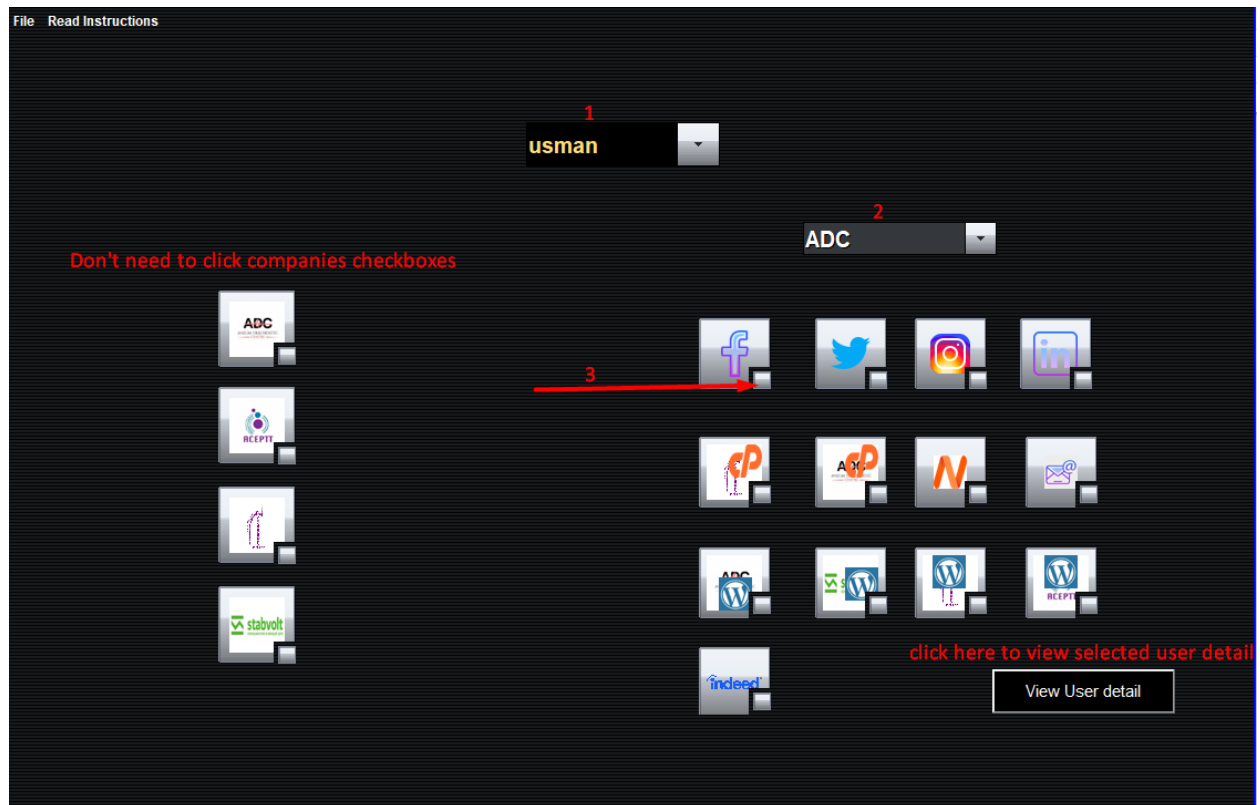

Click social media manage for entering credentials of social medias as follows;

First of all select company then social media and then username and password and click submit.

**Make sure you have enter all companies and their social media then go to admin panel to allow social media to users .**

After entering all social media go back and click to Admin panel it will open this window as;

Make sure every time you open this window select user first , to **ALLOW** any social media first select company then user and then click social media checkbox . Company selection is from dropdown of companies not from companies checkboxes.

To view detail of user select user first then click view user detail button .

There is no click event on companies checkboxes therefore you don't need to click any company check box.
